<b>Award Description</b> This project will investigate the influence of mastery motivation climate physical education programming on physical activity in rural african American children (ages 5-8) who are risk for poor health. The long term goal is to provide school age children quality experiences that promote physical activity and reduce the risk for obesity through the implementation of an empirically validated physical education curriculum.

Project Name or Project/ Program Title	Exploring Physical Activity Response to Motivational climates in african American Children	Activity Codes (NAICS or NTEE-NPC) (up to 10)
Quarterly Activities/ Project Description	<p>All data has been collected and coded for data analysis. The first manuscript has been submitted for publication. This data is supportive of the hypothesis related to climates and physical activity engagement. The findings show that children in grades K-2 engaged in more physical activity, based on pedometer step count, SOFIT observation when exposed to a mastery climate as compared to a traditional, teacher centered approach (Table 1). The participants in the MMCPEP accumulated an average of 239 more steps or 11 more steps/min in a 30-minute period compared to participants in the LAPEP. In terms of SOFIT, teachers spent less in management activities, less time sitting, more time in fitness activities and more in MVPA (difference is due to time spent in vigorous physical activity) in the MMCPEP condition compared to participants in the LAPEP. These findings demonstrated that when instructional climates within a K-2nd grade physical education program focus on mastery-climate and emphasize personal improvement and effort, physical activity engagement is positively affected. Furthermore, children were able to manage themselves appropriately.</p> <p>We are currently preparing manuscripts for publication.</p> <p>This project is complete.
