<b>Amount of Award</b> 79133.00	<b>Total Amount of Payments to Vendors less than \$25,000/award</b> 12689.55
<b>Award Date</b> 06/18/2010	
<b>Award Description</b> The objective is to investigate the role of dredging on fish assemblage stability and persistence on sand bars in the Alabama River. In addition, we will assess diel patterns of habitat use of non-game fishes on sand bars. The role of sand bar size and spatial position will also be investigated. Fishes will be sampled using 100' seines, and samples will be kept separate so that the detectability of each species may be calculated. After identification, most fishes will be released; some vouchers will be taken. These data will provide a baseline for management of the Alabama River aquatic habitats associated with dredging.

**Project Information**

<b>Project Name or Project/ Program Title</b>	Imperiled Fish Survey of Selected Sites in the Alabama River and Associated Tributaries	<b>Activity Codes (NAICS or NTEE-NPC) (up to 10)</b>
<b>Quarterly Activities/ Project Description</b>	We sampled a total of 19 sites during our work, including four diel samples and eight summer/fall samples. We detected 47 species of fishes, one of which is a species of special concern. In addition, eight tributary sites were sampled in order to provide baseline data in previously unsampled watersheds. During our survey we discovered extremely large numbers of Gulf Menhaden, a species normally found only in the Gulf of Mexico. This species was found in both summer and fall samples, suggesting that it may not migrate back to the Gulf. The impact of this species on the Alabama River ecosystem is unclear, but future work is aimed at understanding the impact of the species on the fish assemblage of the Alabama River.	<b>Activity Code 1</b> Z99 <b>Activity Code 2</b> B43 - NTEE <b>Activity Code 3</b> <b>Activity Code 4</b> <b>Activity Code 5</b> <b>Activity Code 6</b> <b>Activity Code 7</b> <b>Activity Code 8</b> <b>Activity Code 9</b> <b>Activity Code 10</b>
