Overview

i>clicker v6.2 provides you the convenience of downloading a class roster from your Course Management System (CMS) rather than creating a roster from scratch. We recommend this option if you use a CMS to post your course grades.

The following sections walk you through the steps for downloading a course roster from your CMS, registering student remotes, and exporting polling results for use with your CMS.
Create a Course

You will need to create a course and change your course settings in i>clicker prior to downloading a course roster from your CMS.

To create a course and change your course settings:

1. Double-click the i>clicker icon to start the program.

2. The Welcome to i>clicker window appears with no courses listed. Click New.

3. A New Course window appears. Enter your Course Name, Course Number, and Section Number. This combined information will serve as the unique identifier for your course.

4. Click Create. i>clicker automatically creates a new course folder in your iclicker Win\Classes or iclicker Mac:Classes folder. The New Course window closes and you are returned to the Welcome to i>clicker window where you will see your course name in the list of courses. Select your course and click Choose.

5. The i>clicker Home Page appears. Click the My Settings button.
6. The My Settings window appears. Click the CMS/Registration tab and select your course management system from the Course Management System list.

7. Click Set for Course. You will receive an alert reminding you to download your CMS course roster before trying to export your student results from i>grader. Click OK. You will export your course roster in the next section.

8. Close i>clicker.
Exporting a Canvas Course Roster

Once you have created a course in i>clicker, you can download a course roster from your CMS and add it to your i>clicker class folder.

To download/export your Canvas course roster:

1. Log into Canvas and select the course for which you are using i>clicker.
   
   **NOTE:** The appearance of your login screen will vary depending on the customizations made by the Canvas administrator at your campus

2. From the top navigation, click the Grades link.

3. From the Gradebook, locate the Gradebook Options drop-down menu and expand it. Select **Download Scores (.csv)**.

4. Save the file into the appropriate course sub-folder within the Classes folder of your iclicker Win or iclicker Mac folder (e.g., iclicker Win\Classes\Sample Physics Course or iclicker Mac:Classes:Sample Physics Course). When saving the file you must change the filename to **roster_canvas.csv**.
**NOTE:** If you do not see your course folder in the iclicker Win\Classes or iclicker Mac:Classes folder, complete steps 2-7 under Create a Course above.

**TIP:** We recommend that you open the CSV file to make sure the file includes: student last name, student first name, and student CMS ID (If you open the file, close it without saving). The information should appear correctly but it is best to double-check your downloaded file to avoid confusion. **IMPORTANT:** Once the file has been downloaded, do not modify the CSV file as it will make the file format unreadable by i>clicker.
Registration Options

Students must register their i>clicker remotes before you synchronize your CMS class roster. i>clicker offers a couple ways to register remotes.

Web Registration (Option 1)

Online registration is recommended, especially for classes of fifty students or more. To register online, send your students to iclicker.com and have them click the Register Your i>clicker button.

![iclicker.com registration page]

💡 TIP: The key to successful web registration is making sure your students know what you decided to use for student ID. When using a CMS, their CMS login names should also be their student IDs. Consider including instructions in your syllabus that describe and/or give examples of the student ID so your students follow the proper registration protocol.

To complete the student registration form, students must:

1. Enter their first name and last name in the appropriate fields.
2. Enter their student ID (student should enter their CMS usernames as their student ID).
3. Enter their i>clicker remote ID. The remote ID is the 8-character alphanumeric code printed below the barcode on the back of their remote.
4. Enter the letters or numbers in the captcha security image on the screen. This verification image is a slightly distorted series of characters used to prevent spam bots from submitting the form. Students can request another image if they find the first hard to see, or play an audio reading of it instead.

5. Click the **Enter** button. An on-screen message confirms that registration was successful. The student’s ID is now tied to their unique i>clicker remote ID.

After your students have registered online, you need to synchronize i>grader to update the information in your class folder (see *Synchronizing Web Registrations*).

**NOTE:** If students have not voted with their i>clicker remotes, their online registration will not synchronize with your i>grader application. Students must vote at least once in class. We recommend that you ask at least one clicker question, such as an attendance or ice-breaker question, on the first day of class in order to capture remote IDs before requiring your students to register.

**TIP:** Students can use a single i>clicker remote for multiple classes and only need to register on the web once. If a student makes a registration mistake they can simply register a second time.

### In-Class/Roll Call Registration (Option 2)

This registration option is only recommended for small classes with fewer than 50 students. The two registration options (Web and Roll Call) can also be used in combination.

**To use Roll Call Registration:**

1. From the **i>clicker Home Page**, click the **Start Session** button to start a session.

2. The i>clicker **Session Toolbar** appears. Click the **Options** button.

3. Select the **Roll Call Registration** menu option. The roll call window appears.
4. Instruct students to press the letters on their i>clicker remotes that correspond to the letters in the columns to the right of their names in the Register Now window. The letters must be pressed in left to right sequence.

5. When a remote is registered, the remote ID appears next to the students name/ID (e.g., 90B, Song, Patrick, #1A081909B).

6. When registration is complete, click Close to end the registration.

The registration window will continue cycling through the student names until all registrations are complete or you decide to close the registration window.

You can control the speed at which your students’ names appear by changing the number in the Allow ___ seconds for viewing option in the bottom right corner. You can also change the student information that displays on screen in the My Settings, CMS/Registration tab. (You must close the Roll Call Registration window before changing the student information.)

**NOTE:** The student list will change to green and yellow five seconds before students names disappear. This gives students warning that a new batch of names is about to be displayed. It is best for students to wait until their names appear again rather than try to register when the screen is green and yellow.

**TIP:** Students that accidentally register their clicker to the wrong name should press DD to clear the incorrect registration and restart their registration process.
Synchronizing Web Registrations

Once your students have registered their remotes, you can use i>grader to synchronize your course roster.

⚠️ **NOTE**: You must be connected to the Internet to synchronize web registrations.

**To synchronize web registrations:**

1. Click the **Sync...** button in the bottom right corner of the *i>grader Home Page*.

![i>grader Home Page with Sync... button](image)

2. A **Synchronize Web Registrations** window appears with a description of the synchronization function. Click **Continue** to proceed.

3. *i>grader* synchronizes your roster information with your students’ online registrations. After synchronization is complete, click **Close** to return to the *i>grader Home Page*.

   If an inconsistency between your roster and the web registrations exist, you will be prompted to resolve it before synchronization is completed. The software will alert you to any discrepancies between your roster and the web registrations. Your choices for resolving registration conflicts include:

   - **Ignore**: no registration information is associated for that particular student.
   - **Accept**: allows the student ID to be included in *i>grader* and associates the student with the correct remote ID.
   - **Cancel**: exits the registration process and leaves *i>grader* unchanged.

**Example**: A student registers his *i>clicker* online, entering remote ID 143B436C and student ID 67-890. Upon synchronizing, you are notified that this student’s student ID does not match any record in your roster file. You realize that the student has both mistyped his last name and entered the student ID in a slightly different format from the student ID in your roster file (with a dash in the middle). Because you can be reasonably sure that this is the correct student, you select his name from the list of students in the roster and click the Accept button. This action associates the correct student ID 67890 with *i>clicker* remote ID 2796B1.

💡 **TIP**: Students can register multiple times without affecting the synchronization process. If you are unsure if a web registration matches the student's roster, you can always ignore the registration, ask your student to register online again, and run another web synchronization process at a later time.
Any unregistered clicker IDs that remain after this step (i.e., you continue to see records with red clicker ID numbers), likely belong to students who have not yet registered online. Check with your students and synchronize again later. If there are problems synchronizing only one or two students who have registered online, you can also run a **Roll Call registration** or register these students manually. You can repeat these steps as often as necessary.

💡 **TIP:** We suggest setting a deadline, no matter how loose or long, for web registration. An end date will allow you to confirm all students are registered and assist you with classroom and i>clicker management.
Uploading grades from i>grader into Canvas

To upload grades into Canvas:

1. When you are ready to upload your i>clicker polling data into Canvas, open i>grader. Make sure the **Output formatted for:** text in the bottom right corner lists Canvas. Click **Export**.

2. The **Select session to be exported** window appears. Click the **checkbox(s)** next to all sessions that you want to export or click **Select All**.

3. The student scored are saved in your course folder, within the Classes folder in a file called **Uploadfile.csv** (e.g., iclicker Win\Classes\Sample Physics Course\Uploadfile.csv or iclicker Mac:Classes:Sample Physics Course:Uploadfile.csv).

   **NOTE:** Only one **Uploadfile.csv** can exist in your course folder at once. If you wish to export data into more than one file during a single i>grader session, you will need to move or rename the previously created Uploadfile.csv before exporting a different selection of sessions. When you no longer need the information in the exported file, you may leave it in your course folder and it will simply be overwritten the next time you need to export.

4. Log into Campus (and into your course) and go back to the **Grades** section.

5. Expand the **Gradebook Options** drop-down menu and select the option **Upload Scores (from .csv)**.

6. In the pop-up dialog that appears, click the **Choose File** button and navigate to the **uploadfile.csv** file in your course folder (e.g., iclicker Win\Classes\Sample Physics Course or iclicker Mac:Classes:Sample Physics Course). Select **uploadfile.csv** and click **Upload Data**.
7. If the imported session does not match an existing entry in your gradebook, you will be prompted to manually select the correct assignment or create a new entry using a drop-down menu. Make your selection then click **Continue**.

8. Once the assignment is selected, a **Points Possible** field becomes visible. The points possible value should automatically populate with the correct number of points from i>clicker. Check the point value, edit if necessary, then click **Continue**.

9. You will then see a preview of the individual student scores before the polling data is imported. Review your imported data, edit the scores if necessary, then click **Save Changes**.

10. You will be returned to the Gradebook, where you can see your new i>clicker scoring data has been updated. If needed, you may continue to edit the scores from within the Gradebook.
Using i>clicker v6.2 with Canvas User Guide

![Canvas Gradebook updated with i>clicker data](image)

11. Repeat the above steps each time you wish to import iclicker scores into your Canvas course.
