

Step 1

To insert a table, click [Insert] then [Table] in the menu bar at the top of Dreamweaver.

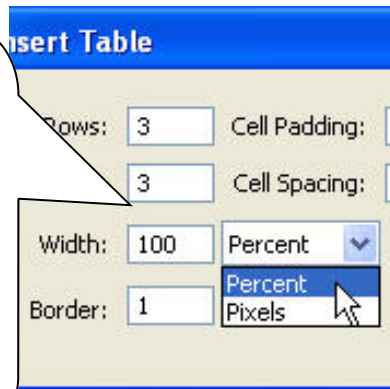

Step 2

In the popup window, the attributes of the table may be changed. In the "Rows" and "Columns" fields, the number of rows and columns may be adjusted.

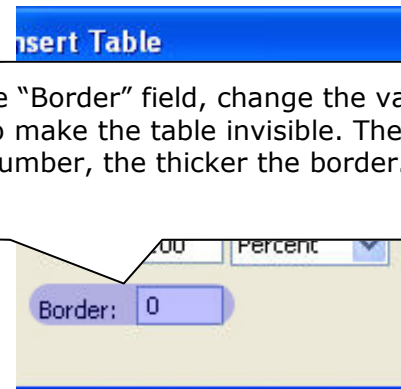

Step 3

In the "Width" field, the size of the table is determined. If you want the table to spread the entire size of the web-page, change the Width to "100" and, in the drop down menu to the right, choose "Percent."

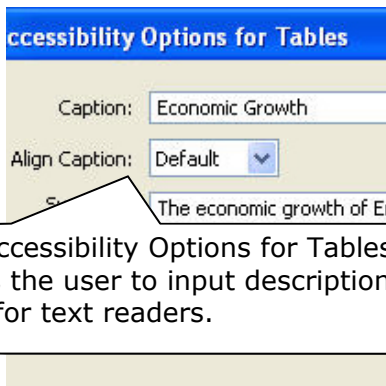

Step 4

In the "Border" field, change the value to "0" to make the table invisible. The higher the number, the thicker the border. Click "Ok."

Step 5

The Accessibility Options for Tables menu allows the user to input descriptions of the table for text readers.

Step 6

The table should now be visible in your web document.
