

Who designs automobiles, toys, furniture, tools, appliances, sporting goods, and more? **Industrial Designers Do!**

Why not invent the future? **Experience Industrial Design** at Auburn University!

The Design Workshop

For more than fifteen years the *Design Workshop* has offered an engaging program for creative young men and women interested in a career in design. This week-long resident camp offers an intensive design experience that begins with basic design fundamentals and progresses to more advanced industrial design concepts.

Each day is filled with practical, hands-on design activities, technical demonstrations, and in-depth instruction. Students work in dedicated studio spaces on the Auburn campus and have access to photo, computer, and prototype fabrication labs.

Individual attention and guidance is given to each student by faculty and staff from the Department of Industrial Design.

Summer Sessions

June 9-14, 2013
July 7-12, 2013

on the Auburn University campus
