Dear coral listers,

We have two projects, one is about development of artificial reefs and the other is about strategies for mitigating anthropogenic stresses on coral reefs of the Gulf of Aqaba. For those two projects, I'll be in need to recruit volunteers to help in carrying out the experiments and do extensive diving in the field follow the in situ experiments as well as monitoring of the artificial reefs. The BSc, MSc and PhD holders in the field of marine biology, coral ecology and/or physiology are welcomed to join the teams. The applicants must be certified divers. We can offer free housing at the Marine Science Station, located immediately at the coral reefs in the Gulf of Aqaba. The duration of stay will be from 3 months and up. Joint students are also welcomed at the MSS where a sandwich program is possible. Interested people, please send your CV to my e-mail (f.horani@ju.edu.jo).

All the best,

Fuad A. Al-Horani
