In this Great Courses DVD course, we will discuss many of literature’s greatest works, from ancient myths to the works of Nobel laureates, rely on fantasy. Even when there has been a dominant preference for realism, generation after generation of readers have been drawn to stories of the fantastic not only for what they help us learn about ourselves as individuals and about our collective selves but also for what they show about our social values.
What can fairy tales and science fiction stories reveal about the psyches of individuals and nations? How does the literature of the fantastic reflect historical periods and preoccupations?

In this Great Courses DVD course, we will learn about two Alpine hikers that stumbled across the well-preserved body of a Copper Age hunter half-buried in a glacier on the border between Italy and Austria in April 1991. This accidental discovery, nicknamed Ötzi the Iceman, possessed a trove of invaluable information about the origins of prehistoric people. Yet while standard archaeological techniques revealed many interesting aspects of Ötzi's life—including his diet and his dress—it was only through the use of physics that more microscopic clues were uncovered. The Physics of History, taught by award-winning Professor David J. Helfand of Columbia University, gives you the background to understand how scientists know what they do about the past.

We all have life stories to tell! Here is an opportunity to reclaim your memories, write about them, and share them with a receptive audience of peers. We will write each Monday morning, responding to stimulus prompts provided by the instructors. Recommended homework: finishing and revising what you have begun in class and reading self-selected memoirs, biographies, and autobiographies.
