

Poster Session I
Governor's Room

Poster		Abstract
A1	<i>Stable and metastable states of small elliptical dust clusters</i> Andrew Kurtz	43
A2	<i>Effect of strong coupling between the particles on the Mach cone structures in a complex plasma</i> P. Bandyopadhyay	44
A3	<i>Steady state flow patterns and corresponding transport in gravitationally equilibrated Dusty (complex) plasma under an external extreme non-equilibrium condition</i> extreme non-equilibrium Harish Charan	45
A4	<i>Electrodynamical properties of the dense semmiclassical plasmas</i> Aktoty Baidualieva	46
A5	<i>Rayleigh-Taylor Instability in a Gravitating Viscoelastic Quantum Fluid</i> Ramprasad Prajapati	47
A6	<i>Obliquely propagating unstable DIA solitary waves in magnetized dusty plasmas with bi-maxwellian electrons</i> Md Mehdi Masud	48
A7	<i>Waves in a quasi-2D strongly coupled paramagnetic dusty plasma</i> Marlene Rosenberg	49
A8	<i>On dust wave instabilities in collisional magnetized plasmas</i> Marlene Rosenberg	50
A9	<i>Trajectory frequency analysis of a simulated, magnetized dusty plasma in a radially-increasing electric field</i> Brian Bender	51
A10	<i>Probe induced voids at high magnetic field</i> Spencer LeBlanc	52
A11	<i>A comparative study of dust behavior in plasmas modeled by local-field and local-mean-energy approximations</i> Althea Wilson	53
A12	<i>Charge variations of a dust grain levitating above the lunar surface during a pass of the Moon around the Earth</i> Jakub Vaverka	54
A13	<i>Secondary emission from clusters composed of spherical grains</i> Zdenek Nemecek	55
A14	<i>Transient states of charging dusts accordance with dust quantity in large RF Helium plasma</i> Soon-Gook Cho	56

Poster	Abstract
A15 <i>Photoemission and work function of the lunar dust simulants</i> Libor Nouzak	57
A16 <i>Small dispersed particles synthesis in the plasma of arc and radio-frequency discharges</i> Gabdullin Maratbek	58
A17 <i>Expansion of Yukawa dust clouds</i> John K. Meyer	59
A18 <i>The Dust Particle Evolution in Divertor Plasma</i> Sandugash Kodanova	60
A19 <i>Experiments on sputtering of dust grains</i> Jiri Pavlu	61
A20 <i>A sensor deployment algorithm for underwater sensor networks inspired by dusty plasma crystallization</i> Xiangyu Yu	62
A21 <i>Parameter Study in Mobile Sensor Network Deployment Algorithm Based on Dusty Plasma Simulation</i> Xin Qianand	63
A22 <i>Structural and transport properties of the complex plasmas in the combined gas discharge</i> Merlan Dosbolayev	64
A23 <i>Resolution of Forces in Poloidal Rotations in Dusty Plasmas</i> Stephen Adams	65
A24 <i>Rotational dust clusters in complex (dusty) plasmas</i> Bo Zhang	66
A25 <i>Generation and control of void in cogenerated dusty plasma</i> Mridul Bose	67
A26 <i>Study of a two-dimensional shear flow</i> Chun-Shang Wong	68
A27 <i>Experimental Observations of Vertical Clouds In a Boundary-Controlled Dusty Plasma Environment</i> Jorge Carmona-Reyes	69

Poster Session II: Thursday, 28 May 2015

Poster Session II
Governor's Room

Poster		Abstract
B1	<i>Static properties of dusty plasmas</i> Yuriy Arkhipov	70
B2	<i>Molecular dynamics simulation of 2D dusty plasma taking into account the induced dipole moment of a dust particle</i> Zhandos Moldabekov	71
B3	<i>A Consistent Model of Plasma-Dust Interactions in a Glass Box</i> Lorin Matthew	72
B4	<i>Coexistence of DA Shock and Solitary Waves in Dusty Plasmas with Two-temperature Ions</i> Kishwar-E Hasin	73
B5	<i>Dust-acoustic Shock Waves in Dusty Plasmas with Dust of Opposite Polarity and Trapped Ions</i> I Tasnim	74
B6	<i>Rayleigh Taylor and Kelvin Helmholtz instabilities in the anodic dusty plasma experiment</i> Khare Avinash	75
B7	<i>Defect structure of probe induced dust density waves in cogenerated dusty plasma</i> Sanjib Sarkar	76
B8	<i>Dust Plasma</i> Scott Robertson	77
B9	<i>Heating and Stability in Magnetized Rotating Dusty Plasmas</i> Carlos Romero-Talamas	78
B10	<i>Vacuum Compatibility of 3D-Printed Parts</i> William Rivera	79
B11	<i>Development of a Bitter-type Magnet System</i> Evan Bates	80
B12	<i>The Effect of Dust Particle Polarization on Scattering Processes in Complex Plasmas</i> Sandugash Kodanova	81
B13	<i>Dust as discharge probe: single and two particle oscillations</i> Peter Hartmann	82

Poster		Abstract
B14	<i>Heating of Dust Particles in the Experimental Setup via Second Order Fermi Acceleration</i> Zhandos Moldabekov	83
B15	<i>Improved two-beam method for heating of dusty plasma crystals</i> Zach Haralson	84
B16	<i>Three-dimensional energy transfer of single particles in dust-density waves</i> Michael Himpel	85
B17	<i>Wakefields, normal modes and information entropy in dusty plasmas</i> Andre Melzer	86
B18	<i>Phase Correlations in Turbulent and Unstable Particle Trajectories</i> Korbinian Schreiber	87
B19	<i>Mapping the Confining Force in a Glass Box</i> Mudi Chen	88
B20	<i>Particle Tracking in Complex Plasmas</i> Brian Lynch	89
B21	<i>Using dust to measure the plasma sheath over a rectangular depression</i> Nicholas Weiner	90
B22	<i>Initial result of three-dimensional reconstruction of dusty plasma with integral photography technique</i> Akio Sanpei	91
B23	<i>Investigating Ion Drag in Ground and Microgravity Dusty Plasma Studies Using PIV</i> Taylor Hall	92
B24	<i>Structure characterization of three-dimensional dusty plasmas using two-dimensional images</i> Bin Liu	93
B25	<i>Perpendicular diffusion of a dilute beam of charged particles under PK-4 conditions</i> Bin Liu	94
B26	<i>Dusty Plasma Physics Facility for the International Space Station</i> John Goree	95
B27	<i>3D particle diagnostic for complex plasma laboratories on the ISS</i> Peter Huber	96
B28	<i>Instabilities in complex dc plasmas</i> Michael Kretschmer	97
B29	<i>Electron Temperature Control in the Zyflex Chamber</i> Christina Knapek	98
