Yost Rocks, Inc. wants to borrow money, and it decides to issue bonds. Each bondholder lends the firm money today for 30 years at 12 percent interest. Yost Rocks pays each bondholder $120 per year and returns the principal ($1,000) back to the bondholder at the end of the 30 years.
Bond Terms

- **Coupon**: The stated interest payment made on a bond.

- **Face Value**: The principal amount of a bond that is repaid at the end of the term. Also called ____________________.

- **Coupon Rate**: The ________ coupon divided by the face value of a bond.

More Bond Terms

- **Maturity**: Specific date on which the principal amount of a bond (i.e., the face value) is repaid.

- **Yield to Maturity (YTM)**: The rate required in the market on the bond. Also called the yield. This will be the “r” we use to calculate price and is quoted as ________. This is often not the same as the coupon rate.
Calculating the Price of a Bond

- How do we calculate the price of a bond?

- The price of a bond is equal to the _________ ________ of the bond’s _________ ______________.

Pricing Coupon Bonds

- Tigers, Inc. decides to issue $1,000 bonds with 5 years to maturity. The coupon rate is 10 percent, paid annually. The yield to maturity is also 10%. What is the price of a Tigers, Inc. bond?
Now, assume the yield to maturity (i.e., the market interest rates) rises to 12 percent. What is the price of the bond now?
Now, assume the yield to maturity (i.e., the market interest rates) falls to 8 percent. What is the price of the bond now?
Assume the yield to maturity is 10 percent. What is the price of the bond if the coupon payments were made semiannually?

Calculating YTM

- You just purchased a DocYost, Inc. bond for $1,050. The bond has a $1,000 face value and an 8% coupon rate, paid semiannually. The bond matures in 10 ½ years. What is its yield to maturity?
Current Yield

- **Current Yield**: __________ coupon divided by current price.

- What it is:

- What it is not:

Another Example

- There are two $1,000 bonds identical in every way (i.e., same risk) except for their coupons and their prices. Both have 3 years to maturity and annual coupons. The first has an 8 percent coupon rate and sells for $974.69. What is its yield to maturity (YTM)?

- The second bond has a 10 percent coupon rate. If it has the same YTM as the first bond, what is its price?

- Which is better?
What about zero-coupon bonds?

- What are they?
- How do I calculate their price?
- What is the price of a zero-coupon bond that has a face value of $1,000 and matures in 10 years, if the YTM is 8%?

Interest Rate Risk

- *Interest Rate Risk*: The risk of a change in the value of a bond because of a change in the interest rate.

1. Bond prices and market interest rates move in ____________ directions.

2. All other things being equal, the longer the time to maturity, the ____________ the interest rate risk.

3. All other things being equal, the lower the coupon rate, the ____________ the interest rate risk.
Other Bond Pricing Truths

- When a bond’s coupon rate is __________ than the YTM (market's required return), the bond’s price (market value) will be greater than its par value.
- When a bond’s coupon rate is __________ the YTM (market’s required return), the bond’s price (market value) will be equal to its par value.
- When a bond’s coupon rate is _______ than the YTM (market's required return), the bond’s price (market value) will be less than its par value.

The Term Structure of Interest Rates

- Term Structure: The relationship between interest rates and time-to-maturity of a debt security.
The Term Structure of Interest Rates

- **Term Structure**: The relationship between interest rates and time-to-maturity of a debt security.

- **Yield on Bonds**
  - Real Interest Rate
  - Inflation Premium
  - Interest Rate Risk Premium
  - Default Risk Premium
  - Liquidity/Marketability Premium

Bond Features

- **Indenture**: The written agreement between the corporation and the lender detailing the terms of the debt issue.

Debt rated Aaa and AAA has the highest rating. Capacity to pay interest and principal is extremely strong.

Debt rated Aa and AA has a very strong capacity to pay interest and repay principal. Together with the highest rating, this group comprises the high-grade bond class.

Debt rated A has a strong capacity to pay interest and repay principal, although it is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than debt in high-rated categories.

Debt rated Baa and BBB is regarded as having an adequate capacity to pay interest and repay principal. Whereas it normally exhibits adequate protection parameters, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity to pay interest and repay principal for debt in this category than in higher-rated categories. These bonds are medium-grade obligations.

Debt rated in these categories is regarded, on balance, as predominantly speculative with respect to capacity to pay interest and repay principal in accordance with the terms of the obligation. BB and Bs indicate the lowest degree of speculation, and Cs, CC, and C the highest degree of speculation. Although such debt is likely to have some quality and protective characteristics, these are outweighed by large uncertainties or major risk exposures to adverse conditions. Issues rated C by Moody’s are typically in default.

D Debt rated D is in default, and payment of interest and/or repayment of principal is in arrears.

Note: At times, both Moody’s and S&P use adjustments (called notches) to these ratings. S&P uses plus and minus signs: A+ is the strongest A rating and A− the weakest. Moody’s uses a 1, 2, or 3 designation, with 1 being the highest.

### Chapter 7 Suggested Problems

- **Concepts Review and Critical Thinking Questions:**
  - 1, 3, 6, and 8

- **Questions and Problems:**
  - 2, 3, 4, 5, 6, 18, 20, 21 (effective annual yield is the EAR), 22, 26, 29 (only parts A and B), and 32.
Example #1

- I just purchased a $1,000 zero-coupon bond that matures in 8 years. If the yield-to-maturity is 6.5%, how much did I pay?

Example #2

- You are considering purchasing a $1,000 Alpha Corp. bond at par. The bond has a 10% coupon rate, paid semiannually, and matures in 4 years. What is its YTM?
Example #3

- Beta Enterprises is issuing 10 year bonds with a face value of $1,000. The coupon rate is 10%, paid semiannually. What is the price of the bond if the YTM is 8%?

Example #4

- Gamma Corporation bonds are selling for $1,386.09. They have a face value of $1,000 and a current yield of 7.2145%. If the YTM is 5%, interest is paid annually, and the bond has 10 years to maturity, what is the coupon rate?
