Interdisciplinary Electives: Courses in areas concerned with applications of mathematics. At least three courses must be taken in the same general area. Students should consult with MATH advisors in choosing interdisciplinary electives and must have a plan of study on file in the Dean's Office in order to be cleared for graduation. In general, students may choose from 2000 level courses or above in the schools of Business, Engineering, and Science and Mathematics. Also, COSAM courses at the 1000 level that are prerequisites for 2000 level COSAM courses would generally satisfy the requirement (for example PHYS 1600-1610 and CHEM 1110-1120).
